Heart to heart was naves known; Mind to mind did naves meat; We are columns left alone Of a temple once complete.

Like the stars that gent thouly, Far apert, through coording mean, In our light we startlight here. that is secial company and a labbiling enumer stream? What our wise philosophy But the glassing of a drass?

only when the sun of love Hells the scattered mars of thought, toly when we have above What the dim-oped world bath taught;

Only when our souls are fed.
By the fount which gives them tirth,
and by taspiration led,
Which they nove drew from earth, We, like parted drops of rain. Swelling till they most and fun, Shall be all absorbed again, Melting flowing into one.

Interesting Associates of the White Boar. The following anecdotes was related to me y a naval officer, at one time engaged in a search for the late Sir John Franklin. the search for the late Sir John Frankels, and will serve to throw some light upon the powers of the white or Polar Bear, (ursus mortimus;) Accustomed to see those creatures cared and eramped in the Zoological Gardens, with only a small pond to swim in, we can form no idea of the switness with they move either on land or in the which they move either on land or in the water. The great breadth, length and flat-ness of their paws afford a large surface whereby to apply their immense muscular power in progression, and is admirably adapted to the yielding surface of the snow, or to the safe passage over newly-formed ice; were it not for this provision, the un-wieldy weight of their bodies would be an insurmountable obstacle in pursuing their

om the deck of one of the Arctic ships, a white hear was seen cautiously approaching from the southward over the uneven surface of land ice, stopping from time to time and raising his black tipped muzzle to snift the air. The bear's sense of smelling is highly developed, the hones and membranes upon which the nerve of smell is appead being unusually large in proportion to his characteristics. to his other organs of sense, and hence we find him trusting more to it than to sight. This is the cause of the peculiar stitteds they assume when doubtful of objects before them. The head is thrown back, the nos-trils dilated, the breath forcibly drawn in, and the body awayed from side to side. One of the officers enatched up his rifle and started alone to shoot the animal. In order to avoid being seen, he made a circuit to obtain the shelter of some elevated por-tions of ice, and by so doing was a considerable distance from the ships before be came within rifle shot. Many officers had by this time come upon deck, and two of them, seeing their comrade single-handed, hastened to join him. Before they were many yards on their way, he fired. The white bear turned and dashed toward him at full called. There was actions to select full gallop. There was no time to reload, and nothing left but to run for his life. Away he went over the floe-ice at a terrific a way he went over the noe-nee at a territe pace, the bear after him, greatly infuriated at the slight wound he had received in the skin of the back. The sight from the ship was one of great anxiety, although the officer was one of the best runners in the vessel. The bear gained rapidly upon him. His two measures, who had gone forth to make a diversion, also ran as fast as they could with the hope of couring with pridacould, with the hope of coming within riflecred. The suspense of the next few minutes Every eye is steadily fixed upon the chase, till at last the bear is within a few yards of P——. Now he is close, his ponderous paw is raised in the air. Crack went Mr. C——srifte, and the brute was arrested in his course for a moment, and the lower jaw of the averaged or a treatment. of the animal or rather the front part of it, is seen hanging down. The ball had taken effect, and at all events would prevent the use of his teeth; still, a blow from the fore paw would prove sufficient to desiroy life if aimed at the head, and this is the point they attack in the seals, drawing the head backward and breaking the neck. The hear now MONETARY AND COMMERCIAL turned in his agony, and, seeing his other antagonist, rushed toward him. A deep breath was drawn by all the spectators, the relief was so great when the animal turned away from his breathless enemy. His new away rous as oreatices chemy. Its away rous assailant was armed with a double-barreled fowling-piece loaded with ball. The distance grows less between them, and no report as yet reaches the ear. About twenty-five yards and still no report. Can his gun have missed fire; no; he is no w coolly dropping on one knee, and taking dutiberate aim. Ah! there is the fissh and now the report! the creature is down and has rolled over. Look, he is up again, but only raised up. n hs fore leg. Now the officer is going close to him; ah! there is another report, and the bear lies full length upon the flocing in the contraction of the contract

an order was given that no one should leave the ships unarmed or alone.

The Polar Bear is capable of getting a living even when blind, as the following an codute will prove: A traveling party had encamped for rest. The men were all of them stowed away in their blanket bags, encamped for rest. The men were all of them slowed away in their blanket bags, beneath the wolf-skin coverlet in their small tent. Suddenly a shock was given to their flimsy house, and presently down it came upon them with a great crash. In a moment they scrambled from beneath the coverings, and beheld a large white bear, quietly poking his nose among the articles upon the sledge. Not a moment was to be lost; an old bombardier of marine artillery dived beneath the fallen tent and brought out a loaded gun, and placing it close to the bear's head, stretched him lifeless upon the ice. The party was much astoniabed at the animal's standing inoffensive to be shot at. On examination he was found to be totally blind, from cataract in both eyes, and must for some time past have procured a living by scent alone.

A swifor who belonged to the crew of a ship employed in the whale fishery, once undertook to attack a large Polar Bear which he saw on the ice at a distance. It was in vain that his companions tried to persuade

ice irrapable of further mischief. And now the three hunters meet over the body of their victim. "Ab, man!" said P---, "I

falt my heart knock sgainst my ribs as if it would best a hole there; for I began to think it was all over with me, when I could hear

he saw on the ice at a distance. It was in vain that his companions tried to persuade him to give up his design. He laid hold of a whale lance, and approached the bear; the bear was, however, as brave as the sailor, and stood waiting for the attack. The sailor seeing him so bold and powerful an enimal, graw faint hearted, and, after standing for sometime motioniess, took to his beels. The bear pursued him with monstrous strides, when the sailor dropped the whale lance, his cap, and then his gloves, one after another, to prevent the bear from following him. "Bruin" examined the lance, tore the cap in pieces, and tossed the gloves following him. "Bruin" examined the lance, tote the cast in pleces, and tossed the gloves over and over; but, not being satisfied with his spoil, he still pursued the sailor, whom he would, without doubt, have torn in pieces, had not the rest of the crew, seeing the danger of their companion, sallied forth to rescus him. The affrighted sailor ran toward his comrades, who opened to him a passage, and then prepared to attack the bear. The bear was, however, as prudent as he had proved himself to be brave; for, after surveying the force of his enemies, he effected an honorable retrent. The valiant sailor, who had fied before his courageous enemy, never stopped for a moment is his flight until he reached the boat, preferring to be laughed at for a coward, rather than remain to encounter a bear. Let the young remember that fool hardiness is not real courage.

The Polar Bear of average length, when first grown, appears to vary from six to seven feet; there are, however, instances on record of a much greater magnitude; for example, the specimen in the British Musoum, brought home by Sir J. Ross from one of his Northern expeditions, measured coven feet eight inches, and its weight, after losing, it is calculated, thirty pounds of blood, was eleven hundred and thirty-one pounds; a sideleven hundred and thirty-one pounds; a sideleven hundred its weight being sixteen hundred.

oler, which is of a uniform white, with a | 1 per cent.

tiogs of straw-color more or toe preventing. In its figure, though the limbs have the manner their respectively the limbs have the manner their respectively to the amost have may be cauly traced a striking distinction, inferable, no doubt, to its almost aquation mode of life. The contour of the heady is coughted; the head flattened, with a straight profile; the mustle broad, but the month provilerly small. The neck, which forms a must remarkable feature, is continued twice as long and as thick, if not thicker, then the head, which is thus thrown out far from the shoulders, so as to give it a poking air. The paws are of huge dimensions, and covered on the under side with course hair; whence it durives resurity in walking over the smooth and slippery ice. The far is long and woolly, except about the head and neck, but of fine texture and don-siderable vaine.

On the inhospitable shores where the Polar Bear resider, there are no forests to

margin of the sea or the craggy icoberg his home, and digs his laired the snews of ages. His habitet may be considered as bounded by the Arctic circle, below which he does not willingly pass; the Northern and Western winds, however, often drift numbers on floating islands of ice to the coast of Siberta and the aboves of Nova Zembia. On the northern coast of America also, down to Hudson's Bay, the present species is by no peans uncommon.

PRIMCIPLE OF THE SELF-REGISTERING THERMOMETER.—According to the London Atheneum, the principle on which this instrument—as invented by Mr. Harrison— acts, is the difference in the expansion and contraction of two metals, from the effects of contraction of two metals, from the effects of heat and cold, and acting by the direct pall of the centracting metal when it is kept in a straight line. It is made sufficiently powerful to overcome any resistance which the fulcrums of the levers or the tracing pencil may cause. Cast-iron and hard rolled copper are used. It appears that copper expands 1.80th of its length, while cast iron only expands 1.910th, with a variation of one hundred and eighty degrees of Pahrenheit's thermometer, which leaves a difference of about the 1.1260th of its length; and as the range of the thermometer in the shade, in that climate, is about ninety degrees, or half of one mate, is about ninety degrees, or half of one hundred and eighty, the 1-2520th part of the length of the bar is employed as a moving power. A bar ten feet long being used, the two metals will then vary nearly the one and twentieth part of an inch between the between the between they have a day in support and the collect day. hottest day in summer and the coldest day in winter. This variation is multiplied by means of a compound lever, so as to get a spflicient scale to divide. The end of the last lever carries a pencil, which traces upon a revolving cylinder the variations that take

SOUTHERN APPRECIATION OF THE NEW YORK TRIBUNE.-The Petersburg (Va.) Ex-

press says: It is useless for the New York Herald and It is useless for the New York Herald and the Express of that city to be diverting their rage from the South by occasional poo-guns at liorace Greeley and Brigadier-Goueral Webb. The man in the white hat is their master and they know it. He may be the Devil, and we are inclined to think that in every-thing but courage, forecast, and that "princely state" which belongs to the failen Majesty of Hell, he is a Devil.

A vulnar Davil, eartible and senanal, but a

A vulgar Devil, earthly and sensual, but a Devil in hardness of heart and vindictiveness of temper. Whatever he may be he is the master of Brooks and Bennett, the master of their masters, the autocrat of the Northern press and politicians, who, one and all, march at his heefs, shout when he shouts, scowl when he scowls, and dare not dissent from him in any recommendation of any devillab deed, murder, arson, housebreaking or rape, which be chooses to recommend.

SOUTHERN ADVANTAGES OVER THE NORTH-ERN FOR.-The Savannah (Ga.) Republican

Our leader is bonored and beloved by all his people. A Napoleon in the field and a Solon in council, they have every confidence in his ability to plan and to execute. In his staff may be found some of the brightest names that adorn American history. In point of respectability, our Government, as regards its civil and military arm, can compare with that of any nation in its day.

The alleged elements of our weakness, to wit: our lack of means to defray expenses, the scarcity of the means of subsistence, and the peculiar character of our social organiza-tion, are all idle chimeras of the Northera brain, which are destined to be dispelled by the light of a bitter experience. Let them trust to it if they will.

Thus composed, we go into the fight; and however fiercely and long it may rage, we have no fears for the final result.

Doring the week ending last evening Financial affairs were even more quiet than they were the previous week, but Money appeared in rather better demand at the close; prime short Paper still being in request at 10@12 per cent. per ansum, and none worthy of mention offering. Considerable inferior Paper was presented in the street during the week, though we heard of no negotiations of this sort, as the Bankers are indisposed even to look at any but undoubted

Gold became lower and was steady, though inactive, yesterday, at 3 prem. for Kentucky and 136 for preferred funds.

Kentucky Bank-notes are now regarded with more suspicion, on account of the passage of an act through the Senate of that State authorizing the suspension of Specie payments.

Uncurrent Money is rather higher than it was last week, and rates are as follows: was last week, and rates are as follows:

The New York Times says: The Southern mind has long been in such a state of mental ecasecy, that nothing short The Southern mind has long been in such a state of mental ecasacy, that nothing short of a sound drubbing, or signal exhibition of the power of the North can ever bring the rebels to anything like reason, either in their conduct or ideas. Whatever they produce seeks its market by sea. Yet, without being able to put even a tab afloat without first stealing it, they grossly insult and attempt to destroy the Government of a first-class naval power. In our contests with them, all our commercial, sea-going and coastwise steamers are just as effective as are ships of war, for the reason that the South have nothing to oppose them. The Baltic, mounted with a few guns, can blockade as well as the Niagars. So many merchantstamers have been taken up by Government, that an adequate blockading fleet for every Southern port is or will soon be under weigh. According to standards recognized among military men, the naval force already provided by us for operating against the rebols is equivalent to a force of one handred thousand men in the field. In the present case it can exert a five fold greater power, because it is in its power to destroy the profits of the industry of every man in the Southern States. Without our consent, not a bale of cotton, or cask of sugar, rice, or tobacco, or a barrel of naval stores can be sent to market. Suppose an effectual blockade to be established, what becomes of Southern finances, Southern armies, Southern speciety? Destroy the labor of a country, and you Southern finances, Southern armies, Southern government, and even Southern society? Destroy the labor of a country, and you destroy the country itself. We can quietly sit down at the North and accomplish all this with our naval arm. We need not move a soldier into a single Southern State. In fact, many think it the better policy to avoid a collision of arms on land, as we have by means of our fleet the matter entirely in our hands. We can reduce the enemy to perfect obedience by the slow process of starvation. We must close Southern ports to save our coamercial marine from being proyed on by pirates, had we no other motive.

being preyed en by pirates, had we no other motive.

We have already had most striking illustrations of the effect of a blockade, whenever it has been put in vigorous practice. Provisions of all kinds go up from one to five hundred per cent. The South are importers of food, and the moment the accustomed channels by which it is received are cut off, starvation stares people in the face. The suffering is greatly aggravated where large bodies of troops are quartered. Provisions and supplies of all kinds are at famine prices at Richmond and Charleston. The time for Mobile and New Orleans will come next. In a few days from this the rebellious States will have a cordon drawn around them, both upon sess and land. They will then, cut off from every market in the world, begin to learn the extent of their resources. Why would it not be a good plan to treat them as we do a noisy criminal—give them six months or a year of close confinement? Or, if that will not do, such a period as will teach them complete docility and submission. How long we fancy. Give the people a good full taste of the effects of Secretion, and they will turn upon and hang the knares that got them into the scrape, instead of threatening to attack our Capital. The shortest way to conquer peace is to make the blockade thorough and effectual. Put the South upon a breadand-water diet, or still coarser fare, till we have a pledge of better coaduat for the future.

Prince George County, Va., has appropriated \$5,000 for the volunteers and the support of their families.
